

DP World London Gateway Engineering Apprenticeship

An overview of the Apprenticeship Scheme

The DP World London Gateway engineering apprenticeship scheme is a four year programme, which will cover mechanical or electrical training.

The main purpose of the role is - through study work experience, coaching, training and development (both practical and vocational) - to complete the DP World London Gateway Engineering Apprenticeship and obtain work related professional qualifications, ensuring the Apprentice is able to carry out a role within engineering competently and effectively.

Entry criteria is 5 GCSEs Grade 4 (previously known as Grade C) and above, which must include Maths, English and Science.

First Year

In the first year Apprentices will be based at ProCat, and will commence studying towards:

- Practical training - mechanical or electrical disciplines
- Employment Rights and Responsibilities
- Level 3 Mechatronics Engineering Programme

This will be block release and will be 4 weeks at College followed by 4 weeks at site, continuously throughout the First Year.

Second and Third Year

Apprentices are based at the port with the emphasis on practical work experience, which contributes to the Level 3 Mechatronics. It is important that the Apprentice works closely with the technicians to get as much relevant experience as possible whilst on site.

The Apprentice will still have one day a week at ProCat, which is devoted to gaining the final year of the Level 3 Mechatronics Apprenticeship.

Whilst not a requirement of the Level 3 Mechatronics Apprenticeship framework, DP World London Gateway is committed to extend the apprentices' education and knowledge.

Fourth Year

Apprentices remain based at the Port with the emphasis on practical work experience. The necessary training will be given in order to help them within their Apprenticeship.
